

TRUTH OR DARE

GEDEWON FIKREMARIAM

Little description about the application

Truth or Dare is a mobile application which is built for code challenge purpose and the application have the following features.

- The users will get splash screen at their first launch that describes about the functions or the features of the application in clear and pictorial slides.
- The users can delete or modify pre-registered players (Player One and Player Two) and they can add new players to the application.
- The users can modify, delete pre-installed game contents and also, they can add their new truth or dare questions by specifying the category of the question.
- The questions (The games) are classified in different categories (family, kids, friends, couples, coworkers, crazy) and players can choose the category they want.
- The application is built by using flutter framework (dart) and I used some 3rd party dart packages like `shared_preferences`, `flutter_staggered_grid_view`, `kf_drawer`, `rflutter_alert` and other some.
